

When now is the time to act, Cloud Now delivers.

Recently completed an acquisition and need to move existing application stacks to your operation systems? Struggling to put the right infrastructure in place ahead of an encroaching data sensitive deadline? Cloud Now Digital Delivery Pods are an end-to-end service that fast-tracks your move from on-prem to cloud-based architecture. Specifically designed to maintain business as usual activity whilst meeting deadlines posed by data centres or acquisitions, they tackle the task of spinning up an Amazon Managed Service (AMS) when you don't have the time, all without missing a step.

Migrate and micro your business-critical applications, now

To fast-track the migration process, ECS has partnered with AWS to provide a custom 'migrate and micro' service. Together, we will migrate your business-critical applications into AMS and activate all beneficial services within the operating model. Once there, our Cloud Now Digital Delivery Pod team will manage, monitor and maintain those applications whilst we break down your monolithic legacy application into microservices – redesigning them where relevant so they can sit on your Cloud First AWS platform.

Core features of a Cloud Now Digital Delivery Pod:

- Reconfigure monolithic applications into microservices that can be extended or optimised without compromising the entire system
- Just like a merger, a migration is not a one and done process. We help you realise more value from the process by adopting a cloud first development mindset
- Onboard an outcome-focused team designed to accelerate your path from on-prem environment to the cloud during time-sensitive scenarios
- Added peace of mind by introducing an AMS, capable of spinning up the services you need when you need them
- Upskilling of internal teams to enable you to insource engineering capabilities and move towards Cloud First development post-migration
- Gain a team committed to breaking down monolithic applications, and identifying where you can get more business value of working in a microservice architecture

Start today

Adopting a Cloud Now Digital Delivery Pods to carry out your migration not only maintains your operational integrity; it adds the capability to extend and enhance key services in your cloud environment. All whilst hitting time-critical deadlines. Start today.

Why we're different

Our consultants deliver cloud, customer experience transformation, continuous improvement and engineering capabilities in one team. This means you get process, engineering and best of breed technology to deliver better customer experiences. Our experience working with some of the largest and most heavily regulated businesses in the UK to accelerate their customer journey transformation also means we put compliance and security at the heart of every solution.
