

# Business transformation at scale, with nothing to lose.

ECS' Enablement Pods™ – the driving force missing from your business transformation.

## Do these challenges sound familiar?

- **Resources**

Not having the time, space or budget to recruit a flexible team of new people with the blend of knowledge and skills required to drive transformation at scale

- **Skills Shortage**

Having pockets of internal skills but not enough to drive a business-wide transformation

- **Enablement**

Equipping internal resources to be self-sufficient remains a continuous and time-consuming challenge

## Get the internal resource and skills you need, without the fuss

Depending on your specific timebound objectives, our Enablement Pods™ provide outcome-focused teams that may cycle depending on the skills required for a successful delivery. This means our Pods remain flexible in their resource profiling so your day to day team is exactly what you need for a particular part of the project. Enablement Pods™ operate in sprints and help enterprises transform at scale by embedding – for short periods – in existing engineering teams to enable them in new ways of working, tooling, etc.

## Why ECS is the partner for you:

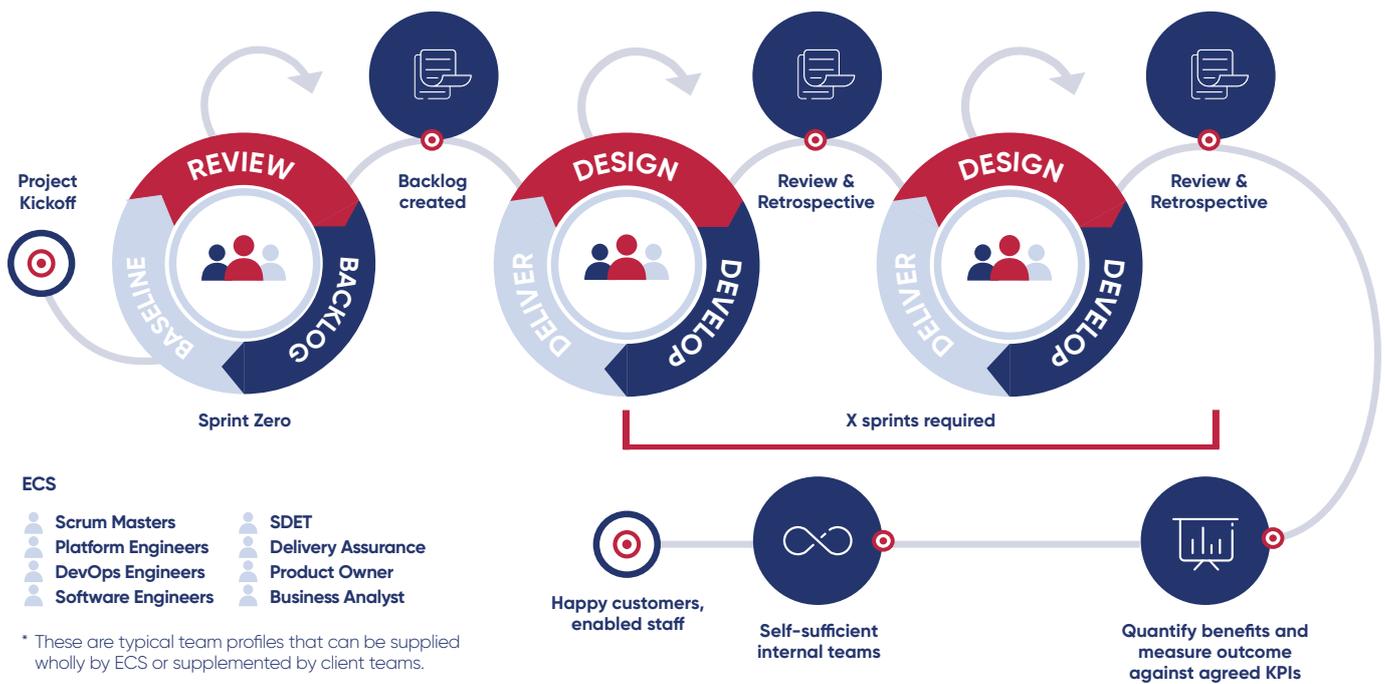

We believe there is a better way to adopt DevOps and continuous delivery practices. A more valuable, outcome focused way to help build tomorrow's enterprises today.

We've been leaders in automation and digital transformation since 2003 and have helped over 100 customers realise the benefits of DevOps and Continuous Delivery practices – including UK retail banks, BP plc and News UK. This means that today we're able to help you deliver business transformation, faster and with a 'nothing to lose' guarantee.

## Previous Enablement Pod outcomes

- **For each £1 invested in us, we delivered £3 of annualised savings** in the development lifecycle of a Retail Bank's core application
- **12x reduction** of application delivery cycle
- **Increased quality of testing through automation** as well as **decreased timescales of test cycles by over 50%**
- **Reduction of application environment configuration delivery timescales from 7200 minutes to 3 minutes**

## WE LISTEN. WE EXECUTE. WE EVALUATE. WE TWEAK. YOU SUCCEED.

- **It starts with a Sprint Zero** – our Enablement Pods™ – and our success – are measured against outcomes and KPIs defined in sprint zero. Each additional sprint provides an opportunity to showcase and review progress ensuring maximum value from all activities.
- **Reduce time from requirement to live** – simplify and optimise your processes and stay ahead of your competition.
- **Effective business change** – not just engineering capabilities. We review each sprint to ensure we're introducing the capabilities you need, when you need them.
- **Operational business excellence** – implement engineering practices and new ways of working to mature towards operational excellence.
- **Accelerate value realisation with nothing to lose** – real return on investment tied to business outcomes. If we don't hit the agreed outcomes, you get a return on the revenue invested.
- **Become self-sufficient** – enable internal teams in new ways of working, processes and tools and embed a continuous improvement ethos.

### Why we're different

Whilst some consultancies offer engineering change, ECS' consultants deliver DevOps, Continuous Testing, Cloud and engineering capabilities in one team. This means you get process, enablement and nearly two decades of experience on top of the first-rate engineering, tooling and testing you would expect.
