

Build modern enterprise applications where they belong – in the Cloud.

Cloud First Digital Delivery Pods leverage modern cloud computing functionality to build software applications that have business value at its core. Designed from scratch, these applications maximise your investment by utilising all the services and agility your cloud platform gives you. This means they are fully monitored and secure in modern infrastructures and specifically designed to be used in your cloud environment – including but not limited to Azure, Amazon and Google.

Build better applications, with more stability.

Just because your applications have more room to roam in the Cloud, doesn't mean the associated costs should be afforded the same luxury. With a Cloud First Digital Delivery Pod from ECS you can release the value of your existing Cloud investment and make it live up to its billing.

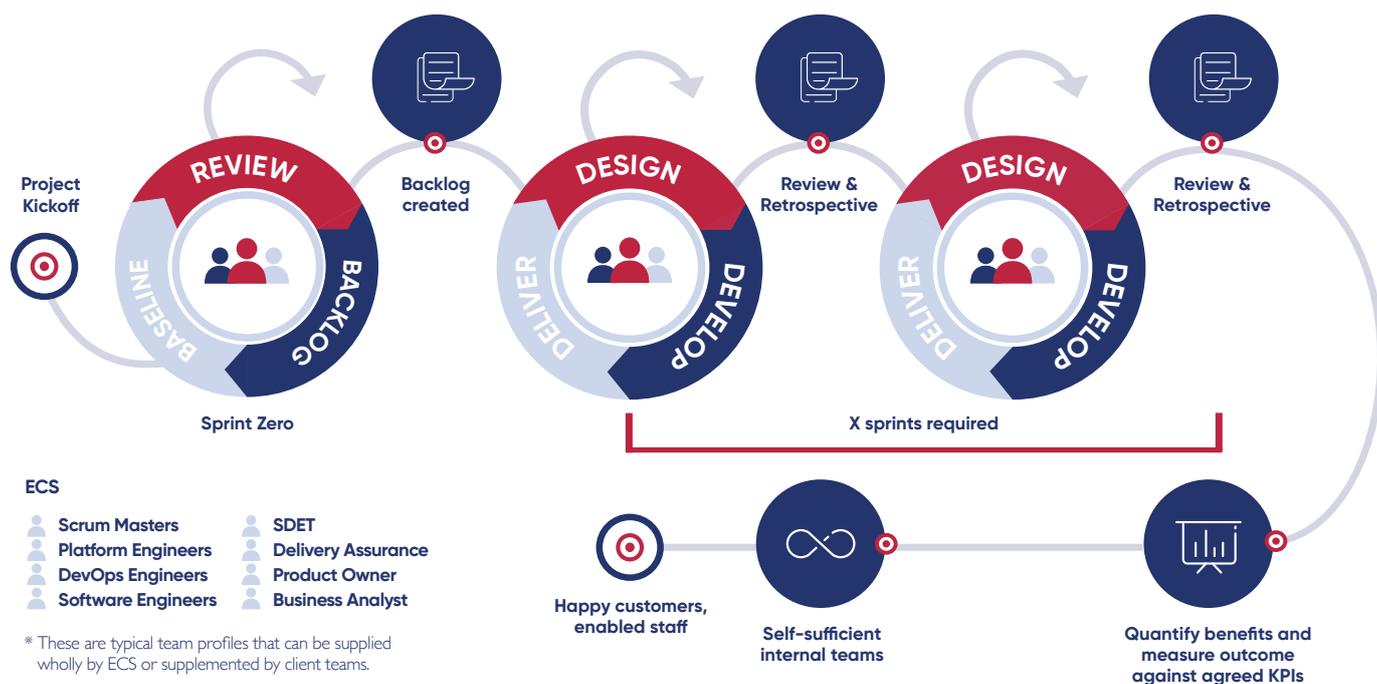

Our fixed-price, outcome driven engagements help you build multi-disciplinary teams with a cloud-first mentality. Don't just host in the cloud, build cloud first software applications there with the benefit of stable, modern infrastructure. With our help, you can fully realise the features native to your chosen public or private cloud platform. With our guidance, you benefit from vastly reduced timings for delivery, regression, configuration and testing.

Core features of a Cloud First Digital Delivery Pod:

- Sophisticated application monitoring that allow you to better applications quicker, and with more stability
- Security baked into applications made to work within a modern infrastructure
- Software development expertise that will monitor the usage of your platform and continually asses cost optimisation
- Improved customer engagement driven by application usage analytics
- Dedicated team focused on integrating a Cloud First mindset through the adoption of new ways of working and UC/UX techniques
- Upskilling of internal teams to enable you to insource engineering capabilities and innovation
- A team committed to maximising the agility and services of your cloud provider

How a Cloud First Digital Delivery Pod works

Each Pod is made up of a team of fully certified cloud engineers and AWS architects to advise and implement your Cloud First solutions. Centred around an initial scoping activity, this Pod uses a combination of UX/CX techniques to understand user needs, create a backlog and define a Minimal Viable Product from the first milestone. Milestone two will then be the delivery of the MVP. Any ongoing delivery and commercial milestones are based on story point velocity defined during milestones one and two. This can look something like the below:

Why we're different

Our consultants deliver cloud, customer experience transformation, continuous improvement and engineering capabilities in one team. This means you get process, engineering and best of breed technology to deliver better customer experiences. Our experience working with some of the largest and most heavily regulated businesses in the UK to accelerate their customer journey transformation also means we put compliance and security at the heart of every solution.
